Valley Water, the California State Coastal Conservancy, U.S. Fish and Wildlife Service and the Army Corps of Engineers (USACE) are pleased to announce that construction has begun on Phase I of the South San Francisco Bay Shoreline Project, between the Alviso Slough/Guadalupe River and Coyote Creek. You are invited to the virtual groundbreaking to celebrate the construction of this important project.

The USACE is currently building the first portion of the project's four-mile coastal flood protection levee, which begins at the Alviso Marina County Park and ends at the Artesian Slough. This area of San José is prone to flooding from storm events and rising sea levels. Once completed, Phase I of this project will reduce that risk significantly. Construction of this first phase is scheduled to finish in January 2024.

ABOUT THE SOUTH SAN FRANCISCO BAY SHORELINE PROJECT

The South San Francisco Bay Shoreline Project is a multi-agency effort between Valley Water, the U.S. Army Corps of Engineers and the State Coastal Conservancy to reduce coastal flood risk for residents, commuters and businesses along the San Francisco Bay Shoreline from the Alviso area of San José to the city of Palo Alto.

When South San Francisco Bay Shoreline Project (Phase I), is completed, this project will help protect about 5,500 residents and commuters and businesses within the vicinity of Alviso, as well as the San José-Santa Clara Regional Wastewater facility and the Silicon Valley Advanced Water Purification Center. The project will also restore and enhance 2,900-acres of tidal marsh and related habitat that was lost due to former salt pond production activities and improve recreational and public access along the bay shoreline.
